

Hygiene and protective measures

→ Patient information

Dear patient

The protection of patients, accompanying persons, visitors and employees against the coronavirus and other viruses has top priority. Therefore, the following additional hygiene and protective measures will apply at the Zuger Kantonsspital in addition to the standard hygiene measures until further notice.

ATTENTION

The hygiene and protective measures may change. Please therefore inform yourself on our website at www.zgks.ch/corona-protective-measures the day before you go into hospital about the hygiene and protective measures that apply at that time. Thank you.

Hand disinfection

Please disinfect your hands before entering and leaving the hospital.

Mask

The **obligation to wear a mask applies**

- > **in case of symptoms of a respiratory infection and/or proven respiratory virus** (coronavirus, RS virus, influenza virus, etc.) for everyone entering the hospital during the entire hospital stay.
- > for all persons involved **in direct contact with immunocompromised patients as well as isolated patients** in accordance with the infection prevention directive (see door sign in front of the patient's room)

Cloth masks are not permitted. **Immunocompromised persons** are generally recommended to wear a mask in the hospital for their own protection, even if the above criteria do not apply.

Inpatient visitors

Visitors with symptoms of a respiratory infection and/or a respiratory virus are recommended to postpone the visit.

If you have any questions or need further information, please contact the clinic in charge (see contact details on the appointment confirmation). We thank you and your relatives for complying with the hygiene and protective measures.
